DISCHARGE EPICRISIS

Full name and age of the patient: -----

Private address: -----

Phone:

Place of work: Pensioner

Date of apply: July 01, 2015

Complaints: Decreased vision sense and both eyes fog

Anamnesis: 19/06/2010 – OS phacoemulsification surgery + intraocular lens 26,5D IQ, Surgion: Kovalenko A.V
18/09/2010 – OD phacoemulsification surgery + intraocular lens 26,0D IQ, Surgion: Kovalenko A.V
Glaucoma since 2004, uses Timolol drops 0.5% 2 times per day and Xalatan drops 1 time per day.

Clinical diagnosis: OU pseudofakic. Open-angle glaucoma 11a (m). Age-related macular degeneration. OS macular epiretinal membrane. Lamellar retinal perforation. Cyst-like macular edema.

Visus: VIS OD – 0.8-0.9 incorrigible; VIS OS – 0.3 incorrigible.

Diagnostic findings: The irrigation of lachrymal ducts was conducted: lachrymal ducts are permeable.
Echography: OD APD – 21.84; OD APD – 21.62; OU- no abnormal echo-signals were detected.
Keratometry: OD 43.89 44.7; OS – 43.77 44.41
Contact tonometry: OD 24.0 MmHg; OS – 25.0 MmHg
DRD of macular zone: OD choroidal neovascular membrane. No edema was detected. OS in advanced membrane dynamics. Surgical treatment is recommended.

Performed treatment: Taking into account the zero tolerance of ocular pressure, the instillation of Azarga drops 2 times per day was recommended, whereafter the ocular pressure normalized – OD 21 MmHg; OS 21 MmHg.

The patient's condition at the time of medical survey: **OD** – cornea is clear, ocular anterior chamber is middle, eye liquid is transparent, diameter of pupil in center is 3.0 mm, pseudoexfoliation at the edge of pupil, IOL in capsular sac. Myodesopsia.
Ocular fundus: Mariotte blind spot is pink-white, the boundaries are clear, MZ reflexes are melt, scleroid eye vessels.

OS – cornea is clear, ocular anterior chamber is middle, eye liquid is transparent, diameter of pupil in center is 3.0 mm, pseudoexfoliation at the edge of pupil, IOL in capsular sac. Myodesopsia.
Ocular fundus: Mariotte blind spot is pink-white, the boundaries are clear, MZ reflexes are melt, macular epiretinal membrane, lamellar retinal perforation, scleroid eye vessels. Periphery and equator of eye are normal.

Recommendations:

1. Medical ophthalmologist supervision at place of residence.
2. To exclude physical activities, flexions, weight-lifting and to avoid overcooling, overwarming and saunas.
3. Consultations by vitreoretinal surgery; decision of issue concerning the

surgical treatment of OS (removal of epiretinal membrane).
